Distributed Systems

Third edition
Version 3.02 (2018)

(Contains minor corrections in comparison to 3.01)

Maarten van Steen Andrew S. Tanenbaum

Contents

| | Pre | eface | | хi |
|--------|-----|-------|---|----|
| | 1 | Intr | oduction | 1 |
| | | 1.1 | What is a distributed system? | 2 |
| | | | Characteristic 1: Collection of autonomous computing elements | 2 |
| | | | Characteristic 2: Single coherent system | 4 |
| Week 1 | | | Middleware and distributed systems | 5 |
| | | 1.2 | Design goals | 7 |
| | | | Supporting resource sharing | 7 |
| | | | Making distribution transparent | 8 |
| | | | Being open | 12 |
| | | | Being scalable | 15 |
| | | | Pitfalls | 24 |
| | | 1.3 | Types of distributed systems | 24 |
| | | | High performance distributed computing | 25 |
| | | | Distributed information systems | 34 |
| | | | Pervasive systems | 40 |
| | | 1.4 | Summary | 52 |
| | 2 | Arcl | hitectures | 55 |
| | | 2.1 | Architectural styles | 56 |
| | | | Layered architectures | 57 |
| Week 4 | | | Object-based and service-oriented architectures | 62 |
| ···oon | | | Resource-based architectures | 64 |
| | | | Publish-subscribe architectures | 66 |
| | | 2.2 | Middleware organization | 71 |
| | | | Wrappers | 72 |
| | | | Interceptors | 73 |
| | | | Modifiable middleware | 75 |
| | | 2.3 | System architecture | 76 |

vi CONTENTS

| | | Centralized organizations | |
|-------|-----|--|---------|
| | | Decentralized organizations: peer-to-peer systems | 8 |
| | | Hybrid Architectures | 9 |
| | 2.4 | Example architectures | 9. |
| | | The Network File System | 9. |
| | | The Web | |
| | 2.5 | Summary | |
| _ | | · | |
| 3 | | cesses | |
| | 3.1 | | |
| | | Introduction to threads | |
| | | Threads in distributed systems | |
| | 3.2 | Virtualization | |
| | | Principle of virtualization | 110 |
| Veeks | | Application of virtual machines to distributed systems | |
| | 3.3 | Clients | 12 |
| 2/3 | | Networked user interfaces | |
| | | Client-side software for distribution transparency | 12 |
| | 3.4 | Servers | 12 |
| | | General design issues | 129 |
| | | Object servers | |
| | | Example: The Apache Web server | |
| | | Server clusters | 14 |
| | 3.5 | Code migration | |
| | | Reasons for migrating code | |
| | | Migration in heterogeneous systems | |
| | 3.6 | Summary | |
| | | | |
| 4 | Con | nmunication | 16 |
| | 4.1 | Foundations | |
| | | Layered Protocols | 16 |
| | | Types of Communication | 17 |
| | 4.2 | Remote procedure call | |
| | | Basic RPC operation | |
| | | Parameter passing | |
| | | RPC-based application support | |
| | | Variations on RPC | 18 |
| | | Example: DCE RPC | |
| | 4.3 | Message-oriented communication | |
| | 1.0 | Simple transient messaging with sockets | |
| | | Advanced transient messaging | |
| | | Message-oriented persistent communication | |
| | | Example: IBM's WebSphere message-queuing system | |
| | | Example: Advanced Message Oueuing Protocol (AMOP). | |
| | | LAMINDIC. TIM VARICUM IVICOSAGE QUEUMIG I IUIUCUI (AIVIUI). | 410 |

CONTENTS vii

| | 4.4 | Multicast communication | 221 |
|-----------|-------------------|--|---|
| | | Application-level tree-based multicasting | 222 |
| | | Flooding-based multicasting | 226 |
| | | Gossip-based data dissemination | 229 |
| | 4.5 | Summary | 234 |
| | | | |
| | | ning | 237 |
| | 5.1 | Names, identifiers, and addresses | |
| | 5.2 | Flat naming | |
| | | Simple solutions | |
| | | Home-based approaches | |
| | | Distributed hash tables | |
| | | Hierarchical approaches | |
| | 5.3 | Structured naming | |
| | | Name spaces | |
| | | Name resolution | |
| | | The implementation of a name space | |
| | | Example: The Domain Name System | |
| | | Example: The Network File System | |
| | 5.4 | Attribute-based naming | |
| | | Directory services | |
| | | Hierarchical implementations: LDAP | |
| | | Decentralized implementations | 288 |
| | | 1 | |
| | 5.5 | Summary | |

viii CONTENTS

| | | GPS: Global Positioning System |
|---|-----|---|
| | | When GPS is not an option |
| | | Logical positioning of nodes |
| | 6.6 | Distributed event matching |
| | | Centralized implementations |
| | 6.7 | Gossip-based coordination |
| | | Aggregation |
| | | A peer-sampling service |
| | | Gossip-based overlay construction |
| | 6.8 | Summary |
| | | • |
| 7 | | sistency and replication 355 |
| | 7.1 | Introduction |
| | | Reasons for replication |
| | | Replication as scaling technique |
| | 7.2 | Data-centric consistency models |
| | | Continuous consistency |
| | | Consistent ordering of operations |
| | | Eventual consistency |
| | 7.3 | Client-centric consistency models |
| | | Monotonic reads |
| | | Monotonic writes |
| | | Read your writes |
| | | Writes follow reads |
| | 7.4 | Replica management |
| | | Finding the best server location |
| | | Content replication and placement |
| | | Content distribution |
| | | Managing replicated objects |
| | 7.5 | Consistency protocols |
| | | Continuous consistency |
| | | Primary-based protocols |
| | | Replicated-write protocols |
| | | Cache-coherence protocols |
| | | Implementing client-centric consistency 407 |
| | 7.6 | Example: Caching and replication in the Web 409 |
| | 7.7 | Summary |
| | 7.7 | Juninary |
| 8 | Fau | It tolerance 423 |
| | 8.1 | Introduction to fault tolerance |
| | | Basic concepts |
| | | Failure models |
| | | Failure masking by redundancy 431 |
| | 8.2 | Process resilience 432 |

CONTENTS ix

| | | Resilience by process groups | |
|----|------------|---|-------|
| | | Failure masking and replication | . 435 |
| | | Consensus in faulty systems with crash failures | . 436 |
| | | Example: Paxos | |
| | | Consensus in faulty systems with arbitrary failures | . 449 |
| | | Some limitations on realizing fault tolerance | . 459 |
| | | Failure detection | . 462 |
| | 8.3 | Reliable client-server communication | . 464 |
| | | Point-to-point communication | . 464 |
| | | RPC semantics in the presence of failures | . 464 |
| | 8.4 | Reliable group communication | . 470 |
| | | Atomic multicast | . 477 |
| | 8.5 | Distributed commit | . 483 |
| | 8.6 | Recovery | . 491 |
| | | Introduction | . 491 |
| | | Checkpointing | . 493 |
| | | Message logging | . 496 |
| | | Recovery-oriented computing | . 498 |
| | 8.7 | Summary | . 499 |
| 9 | Seci | urity | 501 |
| | 9.1 | Introduction to security | |
| | /.1 | Security threats, policies, and mechanisms | |
| | | Design issues | |
| | | Cryptography | |
| | 9.2 | Secure channels | |
| | | Authentication | |
| | | Message integrity and confidentiality | |
| | | Secure group communication | |
| | | Example: Kerberos | |
| | 9.3 | Access control | |
| | | General issues in access control | |
| | | Firewalls | . 533 |
| | | Secure mobile code | . 535 |
| | | Denial of service | . 539 |
| | 9.4 | Secure naming | . 540 |
| | 9.5 | Security management | |
| | | Key management | |
| | | Secure group management | . 545 |
| | | Authorization management | |
| | 9.6 | Summary | |
| Bi | bliog | raphy | 555 |
